Data & Analytics Developer, building data platforms and operational intelligence systems using SQL, Python, Microsoft Fabric, and Power BI. I design the data layer and the product layer on top: from pipelines and KPI models to telemetry platforms and inference pipelines.

Experience

BI & Analytics Developer

VNS Solutions • Jan 2024 - Dec 2025

- Built end-to-end analytics for clients across retail, F&B, and online services; Fabric ingestion and notebook-based Python transformations feeding Power BI dashboards
- Replaced a client's manual weekly reporting (~12 hrs/week) with KPI models and real-time dashboards
- Built automated refresh and validation across pipelines so reporting stayed reliable without intervention

Product & Analytics Developer

LiteStore • Apr 2021 - Apr 2023

- Sole engineer on a short-term retail space booking platform (litestore.in); built full stack on Next.js + MongoDB + AWS across 10+ live locations
- Led CRA → Next.js migration with SSR and edge caching, reducing page load 3.0s → 0.6s
- GA4 instrumentation fed A/B experiments that drove a 20% conversion uplift
- Owned product, client communications, brand identity, hiring/onboarding my own replacement at handoff

Frontend & Brand Developer

Drop • Jan 2021 - Apr 2021

- Built React surfaces for a smart-lockbox delivery product; owned backend services, CD pipeline, hosting, and brand identity as the sole technical and creative contributor.

Featured Project

Off The Pace • Python • SQL • dbt • XGBoost

- End-to-end F1 lap decomposition platform: FastF1 ingestion → Hive-partitioned Parquet → dbt transform layer (58 models, 339 tests) with a CI-enforced additive invariant across all 7 pace components
- XGBoost model suite (degradation quantile trio, cliff classifier, remaining life) exported to ONNX; backtesting pipeline gates deployment on accuracy regression; all 5 models beat baseline

Education

MBA in Business Analytics • BITS Pilani, Dubai • Feb 2026-2028 (*evening classes*)

MSc in Computer Science • Queen Mary, University of London • 2022-2023

BTech in Computer Science & Engineering • GITAM • 2018-2022

Technical Skills

- **Analytics & Strategy:** SQL, Python, Power BI, DAX, Mixpanel, Data Modelling, KPI Development
- **Engineering & Infra:** Microsoft Fabric, PostgreSQL, AWS, Docker, REST APIs, CI/CD, GitHub
- **Certifications:** Microsoft PL-300: Power BI Data Analyst (Expected July 2026)
